

FACULTY OF ELECTRICAL
ENGINEERING**SUBJECT CARD**

Name in Polish: **Wybrane zagadnienia teorii obwodów**
 Name in English: **Selected problems of circuit theory**
 Main field of study (if applicable): **Electrical Engineering**
 Specialization (if applicable): **Industrial Electrical Engineering**
 Level and form of studies: **2nd level, part-time**
 Kind of subject: **obligatory**
 Subject code: **ELR051371**
 Group of courses: **NO**

	Lecture	Classes	Laboratory	Project	Seminar
Number of hours of organized classes in University (ZZU):	22	11			
Number of hours of total student workload (CNPS):	90	30			
Form of crediting:	examination	crediting with grade			
For group of courses mark (X) final course:					
Number of ECTS points:	3	1			
including number of ECTS points for practical (P) classes :		1			
including number of ECTS points for direct teacher-student contact (BK) classes:	2.10	0.70			

PREREQUISITES RELATING TO KNOWLEDGE, SKILLS AND OTHER COMPETENCES

1. The student knows the mathematical analysis and the linear algebra as well as some theory of complex functions upon the fundamental level.
2. The student knows the electric - magnetic field theory and the circuit theory upon the fundamental level.
3. The student is able to obtain some scientific information

SUBJECT OBJECTIVES

- C1. The purpose of this education is to be able to form the stability problem for the phase space.
 C2. The purpose of this education process is to be able to solve some selected nonlinear problems in electrical engineering
 C3. The purpose of this education is to be able to form the stability problem for the number sequence field used to the digital system
 C4. The purpose of this education is to be able to find some results of discrete problems for the circuit theory
 C5. The purpose of this education process is to be able to make use of the improper Fourier integral for the circuit synthesis - analysis problem
 C6. The purpose of this education process is to be able to form and to solve some differential matrix equations for the circuit theory.

SUBJECT LEARNING OUTCOMES*relating to knowledge:*

- PEU_W01 The student has the knowledge in terms of the nonlinear circuit stability problem and of an analysis of nonlinear phenomenon
 PEU_W02 The student has the extensive theoretical and particular knowledge in terms of the discrete analysis for the circuit theory
 PEU_W03 The student knows the particular mathematical methods in terms of the circuit synthesis - analysis problem

relating to skills:

- PEU_U01 The student is able to solve the stability problem for the nonlinear systems and he can analyse some phenomena in these systems
 PEU_U02 The student can realize some analysis - synthesis problem for the given circuit
 PEU_U03 The student can make use of the Zet and Fourier transformation

relating to social competences:

- PEU_K01 The student is able to think in a creative way.

PROGRAMME CONTENT

Form of classes - lecture		Number of hours:
Lec 1	The Liapunov stability, the first approximation method,	2
Lec 2	The phase plane, a chaotic system, the orbital stability, the small signal method,	2
Lec 3	The linearized equation problem, the voltage and current ferroresonance effect,	2
Lec 4	Some discrete analysis problems : the periodicity operator , the continuous function filter theorem and the Zet transformation	2
Lec 5	The input - output distribution and the impulse (digital) system, the initial state - stability - stationary state problem for the impulse systems,	2
Lec 6	The Dirichlet - Cauchy conditions, the generalized form of the Zet transformation	2
Lec 7	Some continuous Fourier analysis problems : the fundamental continuous spectrums,	2
Lec 8	Some applications of the Cauchy theorem , indeterminacy principle	2
Lec 9	A calculus of residuum in terms of the continuous spectrum theory	2
Lec 10	Some state parameter vector problems : the own vector and a norm of a matrix, the matrix series and the matrix functions, the Sylvester relationship, the Cayley - Hamilton identity	2
Lec 11	The differential and integral operations for the matrix functions, the state parameter vector and the differential matrix equations	2
Total hours:		22

Form of classes - class		Number of hours:
Cl 1	The state parameter vector method	2
Cl 2	The unit - dimension stability problem	2
Cl 3	The block diagram method	2
Cl 4	The RLC circuit synthesis , The flow graph method	2
Cl 5	The Zet transformation, the Fourier transformation	2
Cl 6	Test	1
Total hours:		11

TEACHING TOOLS USED

- N1. The problem lecture
N2. The traditional class form

EVALUATION OF SUBJECT LEARNING OUTCOMES ACHIEVEMENT

Evaluation <i>F - forming (during semester) P - concluding (at semester end)</i>	Educational effect number	Way of evaluating educational effect achievement
F(W)	PEU_W01 PEU_W02 PEU_W03	Examination
P(W)	P=F1	
F1(C)	PEU_U01 PEU_U02 PEU_U03	Test
P(C)	P=F1	

PRIMARY AND SECONDARY LITERATURE

PRIMARY LITERATURE:

- [1] Uruski M, Wolski R, Wybrane zagadnienia z teorii obwodów, PWr., Wrocław 1984
