

FACULTY OF ELECTRICAL
ENGINEERING**SUBJECT CARD**

Name in Polish: **Podstawy automatyki 1**
 Name in English: **Fundamentals of control engineering 1**
 Main field of study (if applicable): **Electrical Engineering**
 Specialization (if applicable):
 Level and form of studies: **1st level, full-time**
 Kind of subject: **obligatory**
 Subject code: **ELR052101**
 Group of courses: **NO**

	Lecture	Classes	Laboratory	Project	Seminar
Number of hours of organized classes in University (ZZU):	30	15			
Number of hours of total student workload (CNPS):	90	30			
Form of crediting:	examination	crediting with grade			
For group of courses mark (X) final course:					
Number of ECTS points:	3	1			
including number of ECTS points for practical (P) classes :		1			
including number of ECTS points for direct teacher-student contact (BK) classes:	2.10	0.70			

PREREQUISITES RELATING TO KNOWLEDGE, SKILLS AND OTHER COMPETENCES

1. Knowledge of fundamentals of electrotechnics, differential calculus and complex functions and numbers.
2. Practical ability to use differential calculus and complex functions.
3. Ability of application of Laplace and Fourier transforms.

SUBJECT OBJECTIVES

- C1. Development and progress of theoretical knowledge concerning compensation allowing to get required parameters of control systems.
- C2. Gaining of theoretical knowledge concerning static, dynamic and quality as well as stability of continuous linear control systems.
- C3. Development and progress of practical abilities of mathematical analysis, synthesis, stability estimation and design of adequate compensation of to continuous linear control systems.
- C4. Gaining abilities of practical analysis and synthesis of continuous linear control systems.

SUBJECT LEARNING OUTCOMES*relating to knowledge:*

- PEU_W01 Has knowledge to build models , to estimate and calculate static and dynamic parameters of fundamental blocks of control systems.
 PEU_W02 Possesses knowledge concerning analysis, operation and quality of control systems.
 PEU_W03 Has knowledge concerning stability of control systems, development of compensation systems as well as improvement and optimisation of continuous linear control systems.

relating to skills:

- PEU_U01 Is able to work out mathematical analysis and synthesis of fundamental elements and complex control systems.
 PEU_U02 Is able to make practical estimation of stability of control systems and design different types of compensators allowing to reach required performance of continuous linear control systems.

relating to social competences:

- PEU_K01 Is aware of necessity of self-reliant information retrieval and creative using of obtained information.

PROGRAMME CONTENT		
Form of classes - lecture		Number of hours:
Lec 1	Introduction. Classification and structure of control systems.	2
Lec 2	Methods of description of control systems.	2
Lec 3	Basic control systems elements - elements: proportional, first order, integrating - ideal and with inertia, differentiating - ideal and with inertia.	2
Lec 4	Basic control systems elements – second order inertial element, second order oscillatory element.	2
Lec 5	Basic control systems elements – elements with transport delay.	2
Lec 6	Requirements for performance of control systems, performance indexes.	2
Lec 7	Block-diagram algebra.	2
Lec 8	Steady state performance of control systems.	2
Lec 9	Stability - definition, basic stability condition. Routh stability criterion.	2
Lec 10	Nyquist stability criterion - left-hand side criterion, logarithmic criterion.	2
Lec 11	Stability analysis based on Ziegler-Nichols approximation.	2
Lec 12	Methods of compensation of control systems.	2
Lec 13	Synthesis of the series compensating units with use of the Nichols chart.	2
Lec 14	Compensation techniques: parallel, in feedback, additive and predictive.	2
Lec 15	Industrial controllers - types, construction, selection of the settings.	2
Total hours:		30

Form of classes - class		Number of hours:
Cl 1	Introduction. Requirements to pass. Laplace transform and its application to description of control systems.	2
Cl 2	Time responses of fundamental blocks of control systems under standard input signals.	2
Cl 3	Time and frequency responses of elements of control systems.	2
Cl 4	Block-diagram algebra. Steady state errors of control systems.	2
Cl 5	Stability analysis of control systems: Routh and Michajlow criteria.	2
Cl 6	Stability analysis – Nyquist criterion, general and simplified, logarithmic criterion, determination of phase and gain margins.	2
Cl 7	Pass colloquium.	2
Cl 8	Discussion of colloquium results, deep analysis of the most difficult problems.	1
Total hours:		15

TEACHING TOOLS USED
N1. Informative lecture.
N2. Classes
N3. Student's own work

EVALUATION OF SUBJECT LEARNING OUTCOMES ACHIEVEMENT		
Evaluation <i>F – forming (during semester) P – concluding (at semester end)</i>	Educational effect number	Way of evaluating educational effect achievement
F1(w)	PEU_W01 PEU_W02 PEU_W03	Presence at the lectures
F2(w)	PEU_W01 PEU_W02 PEU_W03	Written or oral examination
P(w)	$P=0,1F1+0,9F2$	
F1(c)	PEU_U01 PEU_U02 PEU_K01	Activity at the classes
F2(c)	PEU_U01 PEU_U02	Results of short tests
F3(c)	PEU_U01 PEU_U02	Crediting test
P(c)	$P=0,2F1+0,2F2+0,6F3$
