

FACULTY OF ELECTRICAL
ENGINEERING**SUBJECT CARD**

Name in Polish: **Energoelektronika**
 Name in English: **Power Electronics**
 Main field of study (if applicable): **Electrical Engineering**
 Specialization (if applicable): **Renewable Energy Systems**
 Level and form of studies: **2nd level, full-time**
 Kind of subject: **obligatory**
 Subject code: **ELR053228**
 Group of courses: **NO**

	Lecture	Classes	Laboratory	Project	Seminar
Number of hours of organized classes in University (ZZU):	30		15		
Number of hours of total student workload (CNPS):	60		30		
Form of crediting:	crediting with grade		crediting with grade		
For group of courses mark (X) final course:					
Number of ECTS points:	2		1		
including number of ECTS points for practical (P) classes :			1		
including number of ECTS points for direct teacher-student contact (BK) classes:	1.40		0.70		

PREREQUISITES RELATING TO KNOWLEDGE, SKILLS AND OTHER COMPETENCES

1. He knows the basics of the electrical circuits. Have basic knowledge in the field of linear and nonlinear circuits. He knows the rules for creating models of peripheral and their mathematical description. He has expertise in the analysis of transients in electric circuits.
2. It know the basic knowledge on the description of automatic control systems.
3. It has a basic knowledge in the field of electronic components, describes their function circumferential model. He knows and has a simple analog and digital systems.
4. He can correctly and effectively apply the knowledge of differential and integral calculus of functions of one variable to the qualitative and quantitative analysis of static states of linear and nonlinear circuits containing semiconductor devices.
5. Able to perform basic measurements of electrical devices using analog and digital oscilloscope.
6. He understands the need for further training and knows the (second-and third-degree, postgraduate courses).

SUBJECT OBJECTIVES

- C1. To provide students with the characteristics of static and dynamic core power semiconductor devices.
- C2. To provide students with the basic topology of the power systems of power converters.
- C3. To provide students with basic mathematical models and methods of analysis of power converters work.
- C4. Acquiring basic skills to apply the measurement technique for determining the characteristics of static power converters.
- C5. To provide students with the basic characteristics of the real power electronic systems.
- C6. Acquiring the ability to develop research results, their interpretation and the interpretation and critical evaluation.

SUBJECT LEARNING OUTCOMES*relating to knowledge:*

- PEU_W01 It has a basic knowledge of the principles and application of the selected power semiconductor devices.
 PEU_W02 It has a basic knowledge of the principles of power electronics systems and their static and dynamic properties.
 PEU_W03 Understand the fundamental physical processes occurring during the conversion of electrical energy by means of static converters and their impact on the control parameters and dynamic power electronic converter.

relating to skills:

- PEU_U01 It can connect to the scheme basic measurement systems of power converters.
 PEU_U02 It can estimate the fundamental values of the elements of the measurement system.

relating to social competences:

- PEU_K01 Is aware of the responsibility for their own work as a team and responsible for the whole team.

PROGRAMME CONTENT

Form of classes - lecture		Number of hours:
Lec 1	Power Semiconductor Switches: Diodes, Thyristors, Triacs, Gate-Turn-Off thyristors, Bipolar Junction Transistor, Metal Oxide Semiconductors Field Effect Transistor, Insulated Gate Bipolar Transistor	2
Lec 2	Drive and snubber Circuits.	2
Lec 3	Diode Rectifier. Phase-controlled Rectifiers and Inverters.	2
Lec 4	Three Phase Converters. Current Commutation Phenomena. External characteristics rectifiers	2
Lec 5	Current and voltage Distortion. Higher harmonic currents mains.	2
Lec 6	A-C Voltage Controllers: Single Phase A-C Voltage Controllers, Three Phase A-C Voltage Controllers. Common Applications.	2
Lec 7	Cycloconverters. Common Applications.	2
Lec 8	Phase Control Systems for Rectifiers, A-C Voltage Controllers and Cycloconverters.	2
Lec 9	DC-DC Switch Mode Converters: Step-Down Choppers, Step-Up Choppers. Four- Quadrant Choppers.	2
Lec 10	DC-DC converters with isolated output.	2
Lec 11	Voltage Source Inverters. Single Phase Inverters. Three Phase Inverters.	2
Lec 12	Pulse width modulation in inverter.	2
Lec 13	Resonant Converters. Common Applications.	2
Lec 14	Control Systems for DC-DC Converters and Inverters.	2
Lec 15	Course credit.	2
Total hours:		30

Form of classes - laboratory		Number of hours:
Lab 1	Introduction. The organization of classes. Conditions of the course. To familiarize students with the basic apparatus	2
Lab 2	Testing of SCR thyristor.	2
Lab 3	Testing of triggering systems.	2
Lab 4	Testing of thyristor rectifier.	2
Lab 5	Testing of AC Voltage Controller.	2
Lab 6	Testing of three phase voltage inverter.	2
Lab 7	Testing of Three Phase PWM Inverter	2
Lab 8	Course credit.	1
Total hours:		15

TEACHING TOOLS USED

- N1. Informative lecture using presentation slides.
 N2. Own work, individual preparation for laboratory classes.
 N3. Consultation.

EVALUATION OF SUBJECT LEARNING OUTCOMES ACHIEVEMENT

Evaluation <small>F - forming (during semester) P - concluding (at semester end)</small>	Educational effect number	Way of evaluating educational effect achievement
F1(W)	PEU_W01 PEU_W02 PEU_W03 PEU_K01	Final test.
P(W)	P=F1	
F1(L)	PEU_U01 PEU_U02	Check preparation for classes.
F2(L)	PEU_U01 PEU_U02 PEU_K01	Activity in the conduct of laboratory measurements.
F3(L)	PEU_U01 PEU_U02 PEU_K01	Appraisal reports made
P(L)	$P=0,25 \cdot F1 + 0,25 \cdot F2 + 0,5 \cdot F3$
