FACULTY OF ELECTRICAL ENGINEERING

SUBJECT CARD

Name in Polish:	**Zastosowanie sztucznej inteligencji w sterowaniu i diagnostyce**
Name in English:	**Application of the artificial intelligence techniques in control and diagnostics**
Main field of study (if applicable):	**Industrial Control Engineering**
Specialization (if applicable):	**Automation of Machines, Vehicles and Apparatus**
Level and form of studies:	**2nd level, full-time**
Kind of subject:	**obligatory**
Subject code:	**APR013221**
Group of courses:	**NO**

	Lecture	Classes	Laboratory	Project	Seminar
Number of hours of organized classes in University (ZZU):	30		15		
Number of hours of total student workload (CNPS):	90		30		
Form of crediting:	examination		crediting with grade		
For group of courses mark (X) final course:					
Number of ECTS points:	3		1		
including number of ECTS points for practical (P) classes :			1		
including number of ECTS points for direct teacher-student contact (BK) classes:	2.10		0.70		

PREREQUISITES RELATING TO KNOWLEDGE, SKILLS AND OTHER COMPETENCES

1. Has knowledge in the field of control theory, informatics and modeling of dynamical systems (using Matlab/Simulink).

SUBJECT OBJECTIVES

C1. Familiarizing students with the extended knowledge on the neural modeling, topologies of neural networks (feedforward, recurrent, neuro-fuzzy networks, radial basis function networks, etc.), their learning and optimization methods.

C2. The acquisition of practical knowledge on the design and software application of different neural network structures and their applications as controllers, state estimators, data classifiers in industrial systems, including electrical drives.

C3. Familiarizing students with extended knowledge on design methods of classical fuzzy systems, different types of fuzzy models (Mamdani, TSK, Tsukamoto, etc.), adaptive and sliding fuzzy control, stability analysis methods for systems with fuzzy controllers.

C4. The acquisition of practical knowledge and skills for design and software application of control structures with different fuzzy controllers and their analysis.

C5. Acquisition and fixing the social competences related to creative thinking.

SUBJECT LEARNING OUTCOMES

relating to knowledge:

PEU_W01 Has a detailed knowledge on different neural network architectures (feedforward, recurrent, neuro-fuzzy networks, radial basis networks, etc.) and their learning methods.

PEU_W02 Has knowledge on fundamental applications of chosen neural network structures as controllers, state estimators, data classifiers applied in industrial systems, including electrical drives.

PEU_W03 Knows possibility of classical structure modifications using elements based on fuzzy systems.

relating to skills:

PEU_U01 Can design the control structure with neural controller.

PEU_U02 Can design different neural network structures for specific application and train those models for problem solving.

PEU_U03 Can design the control structure with adaptive fuzzy controller.

relating to social competences:

PEU_K01 Can think and act in a creative way.

PROGRAMME CONTENT		
Form of classes - lecture		**Number of hours:**
Lec 1	Introduction. Basic concepts of artificial intelligence. The most important trends of researches and historical stages of development. The Turing test. Examples of applications.	2
Lec 2	Fundamental definitions related to neural modeling – repetition. Feedforward network, recurrent networks, radial basis function neural networks, ADALINE and MADALINE networks, selforganising networks, neuro-fuzzy models – their training methods.	2
Lec 3	Advanced learning methods and structure optimization methods for neural networks.	2
Lec 4	Software implementations and tests of neural networks used in control and diagnostics. Hardware applications of neural models in programmable devices.	2
Lec 5	Neural controllers for dynamical plants – overview of solutions. Application of neural models trained off-line in control structures.	2
Lec 6	Adaptive neural controllers (tunned on-line) for dynamical plants – conception and examples of applications (including electrical drives).	2
Lec 7	Neural state variables estimators for dynamical plants (including electrical drives).	2
Lec 8	Neural diagnostic systems (application for faults recognition in electrical machines and drives).	2
Lec 9	Fuzzy logic theory and system – repetition.	2
Lec 10	Fuzzy systems of different types, like: Mamdani, TSK, Tsukamoto and others.	2
Lec 11	Parameters tunning of fuzzy systems.	2
Lec 12	Modification of classical control structures using elements based on fuzzy systems.	2
Lec 13	Modification of classical estimation techniques using fuzzy models - application in electrical drives.	2
Lec 14	Adaptive fuzzy control.	2
Lec 15	Stability of fuzzy control systems.	2
	Total hours:	**30**

Form of classes - laboratory		**Number of hours:**
Lab 1	Introduction. Organization of exercises.	1
Lab 2	Design of neural controllers, including adaptive controllers.	4
Lab 3	Design and training of neural state variables estimators for dynamical plants.	2
Lab 4	Design of fuzzy systems of different types.	4
Lab 5	Adaptive fuzzy control for dynamical plants.	4
	Total hours:	**15**

TEACHING TOOLS USED
N1. Lecture with multimedia tools combined with classical lecture (problem oriented).
N2. Own work – studying problems and preparation to the exam.
N3. Consultations.
N4. Own work – preparation to the laboratory exercises.
N5. Testing of student knowledge with short test before laboratory exercises.
N6. Laboratory exercises – discussion of the obtained experimental results in reports.

EVALUATION OF SUBJECT LEARNING OUTCOMES ACHIEVEMENT		
Evaluation *F – forming (during semester)* *P – concluding (at semester end)*	**Educational effect number**	**Way of evaluating educational effect achievement**
F1(W)	PEU_W01 PEU_W02 PEU_W03	Examination (written).
P(W)	P=F1	
F1(L)	PEU_U01 PEU_U02 PEU_U03	Evaluation of student preparation to laboratory exercises (short tests).
F2(L)	PEU_U01 PEU_U02 PEU_U03 PEU_K01	Activity in the laboratory practices.
F3(L)	PEU_U01 PEU_U02 PEU_U03	Evaluation of the laboratory reports.
P(L)	P=0,3*F1+0,4*F2+0,3*F3
