FACULTY OF ELECTRICAL ENGINEERING

SUBJECT CARD

Name in Polish:	**Modelowanie cyfrowe w elektroenergetyce**
Name in English:	**Digital Modelling in Power Systems**
Main field of study (if applicable):	**Electrical Engineering**
Specialization (if applicable):	**Electrical Power Engineering**
Level and form of studies:	**2nd level, full-time**
Kind of subject:	**obligatory**
Subject code:	**ELR052113**
Group of courses:	**NO**

	Lecture	Classes	Laboratory	Project	Seminar
Number of hours of organized classes in University (ZZU):	15		15		
Number of hours of total student workload (CNPS):	30		30		
Form of crediting:	crediting with grade		crediting with grade		
For group of courses mark (X) final course:					
Number of ECTS points:	1		1		
including number of ECTS points for practical (P) classes :			1		
including number of ECTS points for direct teacher-student contact (BK) classes:	0.70		0.70		

PREREQUISITES RELATING TO KNOWLEDGE, SKILLS AND OTHER COMPETENCES

1. Student should have the basic knowledge of fundamentals of circuit theory and basics of differential calculus.
2. Student should know how to formulate digital models of electrical circuits and to conduct analyses regarding accuracy, stability and frequency characteristics.
3. Student should know how to analyse steady states and transients in linear circuits.

SUBJECT OBJECTIVES

C1. To provide knowledge of methods for preparing simulation models of one- and three-phase circuits.
C2. Learning how to formulate digital models of electrical circuits and to conduct analyses regarding accuracy, stability and frequency characteristics.
C3. To provide knowledge of modelling a power line with distributed parameters.
C4. Familiarization with principles of using professional simulative programs, in particular with ATP-EMTP program as an example, for simulating transients in electrical circuits.

SUBJECT LEARNING OUTCOMES

relating to knowledge:

PEU_W01 Student gets the knowledge on description of models for linear electrical circuits with use of differential equations and their numerical solution applying different numerical procedures of integration.

PEU_W02 Student gets the knowledge regarding evaluation of accuracy and stability of the solution of a differential equation in a numerical way.

relating to skills:

PEU_U01 Student is able to model linear elements and branches and also a power transmission line with distributed parameters, in particular, applying a graphical editor of this program, forms a structure of a simulative model, sets simulation parameters

PEU_U02 Student is able to apply results of computer simulation to analyse of dynamic electric circuits.

relating to social competences:

PEU_K01 Student can act independently and cooperate within a group working on a complex engineering project.

PROGRAMME CONTENT		
Form of classes - lecture		**Number of hours:**
Lec 1	General introduction – aims of the course. Establishing conditions for passing and marking the course. Introduction into ATP-EMTP program: structure of the program and its characteristic. Modelling of 3-phase network with lumped parameters.	2
Lec 2	Modelling of overhead and cable lines with distributed parameters	2
Lec 3	3-Phase transformer modelling; representation of electric and magnetic circuits.	2
Lec 4	Modelling of instrument transformers; representation of the relay input circuits.	2
Lec 5	Representation of the induction motors; electric and mechanical circuit model.	2
Lec 6	Synchronous generator model. Parameter calculation.	2
Lec 7	Wind generation modelling: electric and mechanic parts.	2
Lec 8	Qualified test.	1
	Total hours:	**15**

Form of classes - laboratory		**Number of hours:**
Lab 1	Presentation of health and safety rules, and general regulations of the laboratory. Establishing conditions for passing and marking the project course. General familiarization with the ATP-EMTP program.	2
Lab 2	Simulation of transmission line with distributed parameters. Measurement of the symmetrical components.	2
Lab 3	Simulation of 3-phase transformer. Test of the transformer energising.	2
Lab 4	Simulation of the instrument transformers with the relay input chain.	2
Lab 5	Simulation of the induction motors. Test of start and load changing.	2
Lab 6	Testing of the synchronous generation with excitation control scheme.	2
Lab 7	Simulation of wind generation station with control scheme.	2
Lab 8	Additional term.	1
	Total hours:	**15**

TEACHING TOOLS USED
N1. Informative lecture.
N2. Simulation program.
N3. Lab reports.

EVALUATION OF SUBJECT LEARNING OUTCOMES ACHIEVEMENT		
Evaluation *F – forming (during semester)* *P – concluding (at semester end)*	**Educational effect number**	**Way of evaluating educational effect achievement**
F1(W)	PEU_W01 PEU_W02	Attendance on lectures
F2(W)	PEU_W01 PEU_W02	Qualified test
P(W)	P = 0,1F1 + 0,9F2	
F1(L)	PEU_U01 PEU_U02 PEU_K01	Activity in the lab
F2(L)	PEU_U01 PEU_U02 PEU_K01	Lab reports
P(L)	P = 0,3F1 + 0,7F2
