FACULTY OF ELECTRICAL ENGINEERING

SUBJECT CARD

Name in Polish:	**Automatyka napędu elektrycznego-podstawy**
Name in English:	**Controlled Electrical Drives - fundamentals**
Main field of study (if applicable):	**Electrical Engineering**
Specialization (if applicable):	
Level and form of studies:	**1st level, full-time**
Kind of subject:	**optional**
Subject code:	**ELR053207**
Group of courses:	**NO**

	Lecture	Classes	Laboratory	Project	Seminar
Number of hours of organized classes in University (ZZU):	30				
Number of hours of total student workload (CNPS):	120				
Form of crediting:	examination				
For group of courses mark (X) final course:					
Number of ECTS points:	4				
including number of ECTS points for practical (P) classes:					
including number of ECTS points for direct teacher-student contact (BK) classes:	2.80				

PREREQUISITES RELATING TO KNOWLEDGE, SKILLS AND OTHER COMPETENCES

1. Has a matured knowledge in the field of commonly used electrical machines and basics of the drive systems.
2. Has a knowledge on the methods of mathematical description, stability analysis methods and dynamical properties of linear and nonlinear control systems.

SUBJECT OBJECTIVES

C1. Familiarizing students with the basic methods and structures of controlled converter-fed DC motor drives and their practical realization.

C2. Familiarizing students with the basic methods and structures of scalar and vector controlled converter-fed AC motor drives and their practical realization.

SUBJECT LEARNING OUTCOMES

relating to knowledge:

PEU_W01 Has matured knowledge on control methods and basic structures of DC motor.

PEU_W02 Has matured knowledge on control methods and basic structures of induction motor drive and brushless DC and AC motors with permanent magnets.

PEU_W03 Can define and describe basic control methods and structures for DC motors, induction motors, brushless DC and AC motors, and characterize their performance.

relating to skills:

relating to social competences:

PEU_K01 Understands the need for continuous life-long learning and qualifications improving (including II and III level university studies).

PROGRAMME CONTENT		
Form of classes - lecture		**Number of hours:**
Lec 1	Introduction, the main goal of the lecture, credit requirements. Classification of the control structures for electrical drives. Static and dynamical optimization of the drive systems.	2
Lec 2	Basic torque control structures of electrical motors.	2
Lec 3	Methods of adjustment of linear controllers for electrical drives: integral criteria, modulus and symmetry criteria.	2
Lec 4	Influence of the control mode to the dynamical performance of the DC motor. Operation with constant and variable excitation flux.	2
Lec 5	Cascade and parallel speed control structure of the DC motor drive. Controllers' adjustment, dynamical performances obtained in both control structures. Comparison. Part 1.	2
Lec 6	Cascade and parallel speed control structure of the DC motor drive. Controllers' adjustment, dynamical performances obtained in both control structures. Comparison. Part 2.	2
Lec 7	Induction motor – mathematical model using vector representation, state equations, equivalent circuit in vector form.	2
Lec 8	Influence of the control method to the static characteristic of the induction motor.	2
Lec 9	Frequency controlled induction motor drives – torque control methods of the induction motor.	2
Lec 10	Methods and structures of the field-oriented control (FOC) of an induction motor; control idea, flux and torque control structure, basic problems of practical realization.	2
Lec 11	Methods and structures of the direct torque control (DTC) of an induction motor; control idea, flux and torque control structure, basic problems of practical realization.	2
Lec 12	Scalar control methods with constant flux and constant slip frequency.	2
Lec 13	Frequency control methods for permanent magnet motors - control of BLDC motor; control idea, speed control structure, performance and applications.	2
Lec 14	Frequency control methods for permanent magnet synchronous motors - control of PMSM drive; vector control idea, speed and torque control structure, performance and applications.	2
Lec 15	Trends and developments in controlled electrical driver – sensorless control, intelligent control.	2
	Total hours:	**30**

TEACHING TOOLS USED
N1. Lecture with multimedia tools combined with classical lecture (problem oriented).
N2. Consultations.

EVALUATION OF SUBJECT LEARNING OUTCOMES ACHIEVEMENT		
Evaluation *F – forming (during semester)* *P – concluding (at semester end)*	**Educational effect number**	**Way of evaluating educational effect achievement**
F1(W)	PEU_W01 PEU_W02 PEU_W03 PEU_K01	Participation in lectures.
F2(W)	PEU_W01 PEU_W02 PEU_W03 PEU_K01	Final exam.
P(W)	P=0,1*F1+0,9*F2
