

FACULTY OF ELECTRICAL
ENGINEERING**SUBJECT CARD**

Name in Polish: **Układy energoelektroniczne w przemyśle**
 Name in English: **Power electronics converters in industry**
 Main field of study (if applicable): **Electrical Engineering**
 Specialization (if applicable): **Industrial Electrical Engineering**
 Level and form of studies: **2nd level, full-time**
 Kind of subject: **optional**
 Subject code: **ELR053216**
 Group of courses: **NO**

	Lecture	Classes	Laboratory	Project	Seminar
Number of hours of organized classes in University (ZZU):	30		15		
Number of hours of total student workload (CNPS):	60		30		
Form of crediting:	examination		crediting with grade		
For group of courses mark (X) final course:					
Number of ECTS points:	2		1		
including number of ECTS points for practical (P) classes :			1		
including number of ECTS points for direct teacher-student contact (BK) classes:	1.40		0.70		

PREREQUISITES RELATING TO KNOWLEDGE, SKILLS AND OTHER COMPETENCES

1. It has a basic knowledge of the principles of operation of power semiconductor devices and electronic systems.
2. He knows the basic methods of mathematical description of converter systems and their control systems.
3. It can be used to analyze the mathematical steady-state and transient in cars and nonlinear electric circuits comprising passive components (resistors, inductance, capacitance) and active (power semiconductor devices).
4. Able to effectively apply the knowledge in the field of automation control systems analysis activities and automatic control of power converters.
5. Able to perform basic measurements of electrical devices using analog and digital oscilloscope.
6. He understands the need for continuing education and professional skills development.

SUBJECT OBJECTIVES

- C1. Acquaint the student with the topology power converters used in electrical equipment.
 C2. To acquaint the student with the basic applications of power converters, control systems and their mathematical models.
 C3. Acquisition of by the student practical skills to connect power electronic systems.

SUBJECT LEARNING OUTCOMES*relating to knowledge:*

- PEU_W01 It has a knowledge of the principles of operation of high-power converter systems for use in industrial equipment.
 PEU_W02 He understands the physical principles of electrical energy conversion in complex systems consisting of: the supply network, power converters and load of converters.
 PEU_W03 He knows the basic problems of electromagnetic compatibility of power converters of phase-controlled, and converters cooperating with mains through the DC circuits and working in modulation mode.

relating to skills:

- PEU_U01 He can connect basic measurement systems for power converters.
 PEU_U02 He can determine the basic characteristics of the load and control for selected power converters.
 PEU_U03 He can verify the results of measurements with theoretical knowledge and execute critically evaluate the knowledge of mathematical models: of static converters, power supply and power receivers connected to the of static converters output.

relating to social competences:

- PEU_K01 He can think and act creatively.

PROGRAMME CONTENT

Form of classes - lecture		Number of hours:
Lec 1	An Introduction. Review of application areas of power electronic converters in industrial systems.	2
Lec 2	Diode rectifiers and phase-controlled rectifiers. Basic topologies high and low power.	2
Lec 3	Multi-pulse rectifiers . The basic parameters.	2
Lec 4	Magnetic components used in the circuits of power converters. Transformers for multiphase power converters . Inductors for filters in AC and DC circuits.	2
Lec 5	Application rectifiers in the basic industrial equipment: welding rectifiers, DC drive systems, traction power network.	2
Lec 6	Application rectifiers in the basic industrial equipment: welding rectifiers, DC drive systems, traction power network	2
Lec 7	Voltage Inverters to power AC drive systems for industry systems.	2
Lec 8	Current source inverter with PWM for industrial electrical drives.	2
Lec 9	Resonant inverters for industrial equipment.	2
Lec 10	AC-AC voltage controllers. Application in welding machine.	2
Lec 11	DC-DC converters.	2
Lec 12	The use of converters DC for drive systems, DC power supply systems, industrial welders processing.	2
Lec 13	Converter systems for reactive power compensation and power electronics active filters.	2
Lec 14	Control of power converters.	2
Lec 15	The influence of selected converters on the power grid.	2
Total hours:		30

Form of classes - laboratory		Number of hours:
Lab 1	Introduction. The organization of classes. Conditions of the course. Safety Instructions. To familiarize students with the basic apparatus.	2
Lab 2	Research the characteristics of the 12 - pulse rectifier.	2
Lab 3	Research of converter for welding machine.	2
Lab 4	Research of step up converter.	2
Lab 5	Research of DC DC converter.	2
Lab 6	Research one-phase active power corrector.	2
Lab 7	Research of FC+ TRC compensator. (Fixed Capacitor +Thyristor Controlled Reactor)	2
Lab 8	Summary of the laboratory. course credit.	1
Total hours:		15

TEACHING TOOLS USED

- N1. Informative lecture with the use presentation slides.
 N2. Laboratory practice held in student groups.
 N3. Consultation.

EVALUATION OF SUBJECT LEARNING OUTCOMES ACHIEVEMENT

Evaluation <small>F - forming (during semester) P - concluding (at semester end)</small>	Educational effect number	Way of evaluating educational effect achievement
F1(W)	PEU_W01 PEU_W02 PEU_W03 PEU_K01	Written exam.
F2(W)	PEU_W01 PEU_W02 PEU_W03 PEU_K01	Oral exam.
P(W)	P=0,4*F1+0,6*F2	
F1(L)	PEU_U01 PEU_K01	Check preparation for classes.
F2(L)	PEU_U02 PEU_U03 PEU_K01	Activity in the conduct of laboratory measurements.
F3(L)	PEU_U01 PEU_U02 PEU_U03 PEU_K01	Grade for the reports made.
P(L)	P=0,25*F1+0,25*F2+0,5*F3
